

Tecnam P2006T Weight and Balance

CONSIDER

Tecnam uses metric units by default. Remember to keep correct units.

The top of the scale uses imperial units (lbs).

To use the graph, start with the empty moment on the left vertical axis. This is counter to many common U.S. trainers which begin performance charts on the lower-left horizontal axis

EXAMPLE

Empty Mass Moment	378 kgm
A/C Empty Mass	790 kg
Front Seats	160 kg
Rear Seats	140 kg
Fuel	72 kg
Baggage	18 kg
Takeoff Weight	1180 kg
